

Worldwide experts in electronic payments and messaging solutions

TurboFileAct means the SWIFTNet system isn't just for financial messaging anymore

- Send any kind of data across the SWIFTNet FileAct system.
- Bundle entire batches of non-urgent FIN messages into a single file and transmit them at a significant cost savings.
- Use the same robust security that SWIFT employs for financial messaging to exchange other kinds of sensitive data.
- Friendly Graphical User Interface (GUI) enables easier downloading of files by multiple correspondents.
- Application server components and GUIs can be deployed on both Microsoft Windows and UNIX servers.
- TurboFileAct can be seamlessly integrated with other TurboSwift products or used as a stand-alone application for file exchanges.
- Choose between real-time file transfer or a store-and-forward mode.
- BankServ offers both a licensed software and a SWIFT service bureau approach at installation.

Why You Need TurboFileAct

If your bank isn't plugged into FileAct, it isn't taking full advantage of its SWIFT connectivity. Whether you need to exchange bulk payments messages, check images, statements, securities information or any other type of sensitive data, TurboFileAct provides a safe and reliable method to send and receive files of any format over the SWIFT Network.

Whether you need to use manually initiated transfers, straight-through processing or a combination of both, TurboFileAct is a cost-effective, out-of-the-box solution.

Cutting Costs by Bundling Transactions

You may be able to realize significant cost savings on many international transactions using TurboFileAct by bundling together batches of non-urgent FIN messages into a single file. Since any data type is supported, you can also use SWIFT's standard bulk payment format or your own proprietary format.

Integrated or Stand-Alone

TurboFileAct can be integrated with BankServ's TurboSwift™ system or operate as a stand-alone application – and it can be set-up in either a licensed software or a service bureau environment.

Other Great Features

Two versions of TurboFileAct allow for either full automation or a "Lite" installation for institutions that only require manually initiated transfers.

An easy-to-use Graphical User Interface (GUI), combined with an automatic error checking and retry mechanism, makes for a high rate of straight-through processing. Its centralized server allows manual transfers to continue without requiring the GUI to be running – a feature not available with other FileAct solutions.

As your bank's international payments business expands, TurboFileAct can expand along with it, enhancing your SWIFTNet connection for years to come.
